Prometheus Pelvic Splint

- Made of Neoprene - very light
- One size fits all
- Splint may be cut to size to allow access to abdomen and groin
- Soft material with no stitching limits risk of pressure ulceration or friction
- The perineum and anus are left uncovered

Reduction and stabilisation of the pelvic injuries should occur as soon as possible, on scene. Studies of patients sustaining pelvic injuries have shown that rapid immobilisation reduces haemorrhage by stabilising the fractured bone ends, reducing bleeding and stabilising clot formation.

The Prometheus Pelvic Splint has been designed for pre-hospital use, and is light and easily adjusted by one person. The soft material, with no internal stitching, minimises pressure points and reduces the risk of pressure necrosis.

Using the preferred method of application, the neoprene can be trimmed once the splint has been sized to the patient, which means that anteriorly the splint is comprised mainly of the blue fastening material, which is only 50mm wide. This allows more access to the inguinal region and urethra for urinary catheterisation and/or femoral vein/artery access. The Prometheus Pelvic Splint is suitable for all sizes – from the child to the bariatric patient.

Specifications	
Material	6mm stretch Neoprene fabric bonded with loop nylon on both faces
Neoprene Sling	L1260mm x W190mm
Hook and Loop Anchor	D100mm x W180mm
Hook and Loop Belt	L430mm x 50mm
Hook and Loop Tab	H100mm x W130mm
Tri-Glide Plastic Loop	50mm
NSN:	6515-99-174-5924
